The Way of Energy

Source bibliography

Everybody’s generating. Show me the grid.

Compiled for Kyle Byrd
November 5, 2026

This bibliography preserves 296 distinct sources documented during the publication research and editorial work: 132 in the current 2026 register, 162 screened exclusions or nonselections, and two additional editorial context sources. It includes articles, interview transcripts, podcast episode pages, employer guides, company announcements, filings and reports, including material not featured in the narrative.

References follow APA 7 author-date-title-source-URL order, with italic titles, alphabetical ordering within each part and a half-inch hanging indent. Titles are transcribed from publisher headings where recovered. Named authors are used when established; otherwise references begin with the title. An executive quoted in an interview is not automatically its author. Unresolved authors, dates and descriptive titles are explicitly flagged.

The mapped publication window is January 1–October 29, 2026. A 2026 publication can describe earlier work. Current graphics show 60 companies across 13 categories: 249 supported entries and 531 unvalidated positions, out of 780 positions. Bibliography entries and company-category markers are different units.

The companion files include the source register, a crosswalk to all 249 displayed supported entries and a discovery log of 1,778 distinct encountered URLs. Search hits, attempted retrievals, full-text inspections and verified evidence are not equivalent. This bibliography reconstructs the retained source record; it cannot recover unlogged browsing history.

Historical screening decisions retain their recorded status. Metadata checks performed while assembling this bibliography do not constitute a fresh substantive verification of every source or its claims. Some references remain incomplete; missing information has not been invented.

Employer-reported and vendor-reported results remain attributed claims. Publication coverage does not establish implementation, independent validation, spending, publishing frequency or candidate outcomes.
